RESEARCH EXPERIENCE

Stanford University <i>PhD Student, Gu Research Group</i>	Stanford, California June 2017 – Present
<ul style="list-style-type: none">▪ Colloidally synthesized solid and hollow single crystal metallic nanoboxes with smooth and rough surfaces. Experimentally tested them using in-situ electron microscopy compression to show the influence of geometry on structural deformation at nanoscale. Demonstrated the effect of surface roughness as stress concentrators at nanoscale.▪ Developed a hybrid method using experimental nanoindentation and finite element modelling to develop computational material models of viscoelastic soft polymeric adhesive thin films.
